

R-STORE 365 ADVANCED

M365 data backup solution

Protect and backup your Microsoft 365 data

The Microsoft 365 suite of services gives you great flexibility, allowing you to work and share your data and files wherever you are. But did you know that backup isn't part of the Microsoft offering? In fact, the worldwide giant only ensures that the infrastructure you use runs efficiently; backup is not part of its service offering.

With the MS365 suite, your data belongs to you, so it's your responsibility to protect it and backup it to be able to restore data that has been erased or damaged.

Our Rstore 365 Advanced solution makes up for this lack by backing up a large proportion of Microsoft data directly in our Data centers.

5 advantages of Rstore 365 Advanced

Protection
against
accidental file
deletion

Data
retention for 1
year (longer
retention
optional)

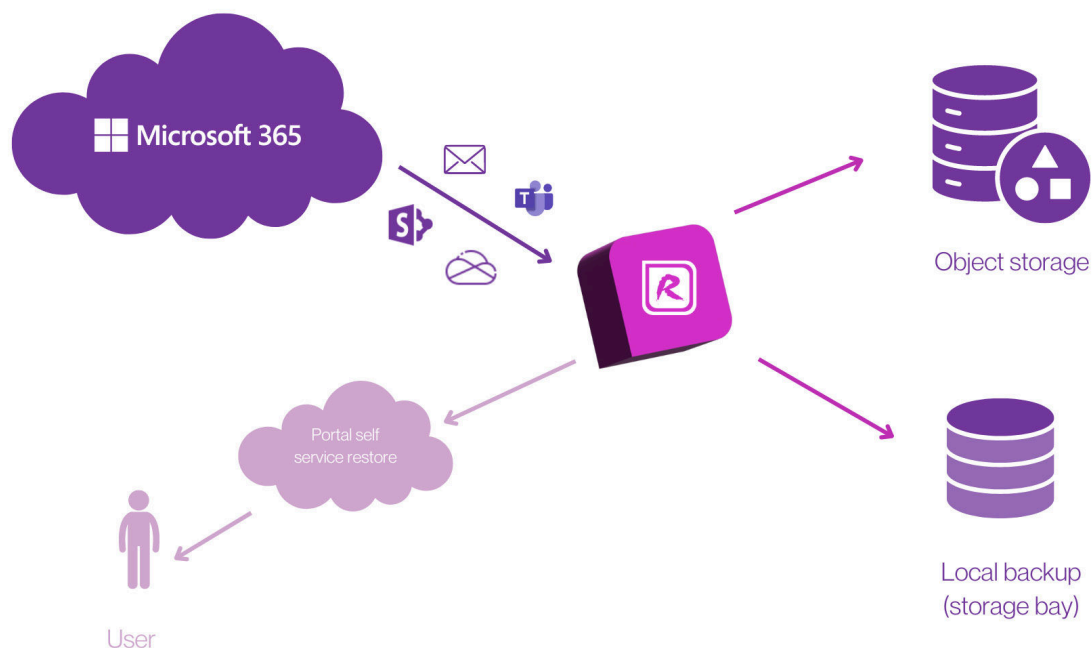

Protection against
internal
security threats
(criminals,
employee
departures, etc.)

Protection
against ex-
ternal secu-
rity threats
(ransomware,
malware, etc.)

Compliance
with
legal and
compliance
requirements

Why choose our Rstore 365 Advanced solution?

- ◆ Rstore 365 Advanced backup data is stored on our own infrastructure, which is hosted in Tier IV data centers in Luxembourg.
- ◆ The backup operation concerns Microsoft 365 data: email, archive, Onedrive, Sharepoint and Teams (except private chats).
- ◆ Data can be restored very quickly: by a request to our support team, or by yourself via our self-service portal.
- ◆ The backup platform is simple and intuitive to use, making it easy to find the data you need.
- ◆ Rstore 365 Advanced doesn't require any installation on your infrastructure
- ◆ Backups are made twice a day, at 12h intervals, on 2 separate storage systems
